INDOOR-DESIGN

Design options for the inside of your front door –
the entrance area is the business card of a house,
but even from the inside a front door does not have
to be boring, but can be actively involved in the
design of the hall.

RA-100

RA-200

RA-300

Mirror-Collection

Even small corridors can be
visually enlarged with a mirror,
transforming your front door
into a useful design element.

RA-900

MEMOBOARD

The interior view RA-900
memoboard combines
functionality with design.

RA-500 bronze
RA-550 silver

VITREALE
**„Italian made glass for
architecture and design"**

Near Milan these glass
applications „Vitreale" occur
to create the interior of your
door. Innovative, original and
practical.

Design variants for the inside of your entrance door.

| image above |
RA-100 additional equipment: mirror

inside handle: 2008-13-I stainless steel
Available for closed, unglazed models.

MODERN

MEMOBOARD

The interior view RA-900 memoboard
combines functionality with design.
Important or beautiful memories, such
as a dream holiday, important medical
appointments or the shopping list, can
be fixed with the supplied magnets on
the inside of your door.

| image right above |

glass with clear edge
inside handle: 2008-13-I stainless steel
Available for closed, unglazed models.

VITREALE

**„Italian made glass for
architecture and design"**

Near Milan these glass applications
„Vitreale" occur to create the interior
of your door. The mirrored flat glass,
with special effects, is an optical high
light for your entrance area. Matt
texture in light relief on a matt satin
background, very insensitive to fin-
gerprints - innovative, original and
practical. Vitreale is available in silver
and bronze.

MODERN

Design variants for your all glass side panel.

The design of the front door gives your home personality. Beside the front door, the side panel is an additional design element of the entrance area. Leave light into your room, but unwanted looks outside. Choose the design that matches your door model or be a designer yourself and give your front door a distinctive charm.
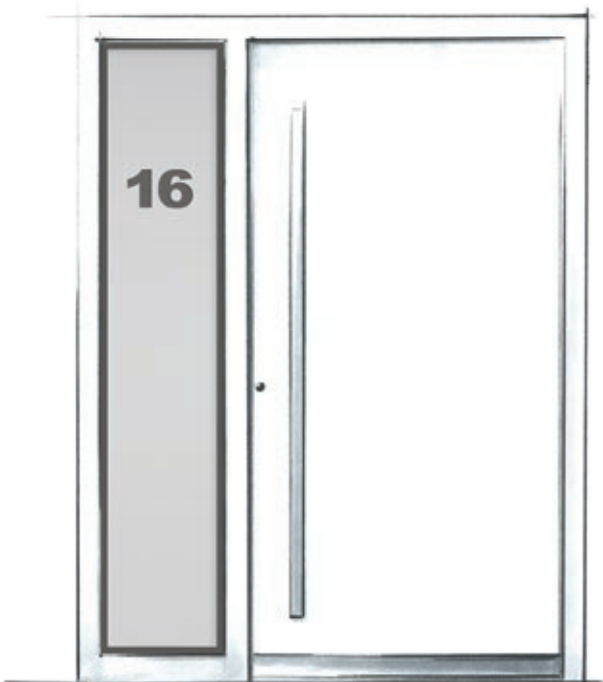

| Variant C |

Individual glazing.

Elegant and nobly solved - your house number integrated as a clear motif in the side panel. This creates a harmonic unit in the entrance *area*. *Example on page 110*

| Variant B |

Glazing „frosted glass with clear edge".

„The Classic model" fits all models. Modern and stylish. Example *on Page 49*

| Variant C |

Glazing „frosted glass" with clear stripes" – optional clear stipes and clear edge.

Perfect for models with pilaster strips or grooves. The number of clear stripes varies according to model. *Example on Page 30*

| Variant C |

Individual glazing.

Silhouette of the island of Sylt (G 501) or customize your desired side panel with family name, animal motif , etc. (G 520 - price on request). This is how your own personal entrance occurs – a unique one!
Example on page 37

| Variant D |

Glazings explicitly adapted to the models.

Suggestions by our designers can be found directly at the models.
Example on page 247

| Variant F |

Glazing: frosted glass with clear edge and clear stripes | pilaster strips between the panes.

Perfect for models with pilaster strips or grooves. The number of pilaster stripes varies according to the model.
Example on page 31

| Variant G |
Glazing: Satinato white pilaster strips between the panes – also available with clear glass.

Perfect for models with pilaster strips or grooves. The number of pilaster strips varies according to model.
Example on page 35

ART-CORTEN

PLUS X AWARD®

2014 ausgezeichnet für:

Innovation

High Quality

Design

The collection we have developed will leave your front door shine in a new „old" glow. With the characteristic look of Corten-Steel you set very special accents in your entrance area. An eyecatcher in which quality, puristic design and aesthetics effect on the observer. However, not only the optics are convincing, but the haptics are also deceptive genuine and the scratch-resistant surface ensures uncomplicated handling.

CERAMIC
ART-STONE

Impressive in the form, unique in the composition. Stone in its original form has been used for thousands of years for the construction of living space. The Art-Stone series makes it possible to use the stone look as a design element for your entrance area. The surface from ceramics transforms the characteristic properties perfectly. Scratch resistant, cool haptics and each model is unique!

ART-CONCRETE

Concrete optics, concrete haptics and yet no concrete!

Art-Concrete is a modern composite material from a flexible mineral base with natural marble parts, much lighter than concrete and therefore flexible to use. Facades with a door panel made of concrete give the façade a unique atmosphere. Each model is unique. Deviating surface structures are given.
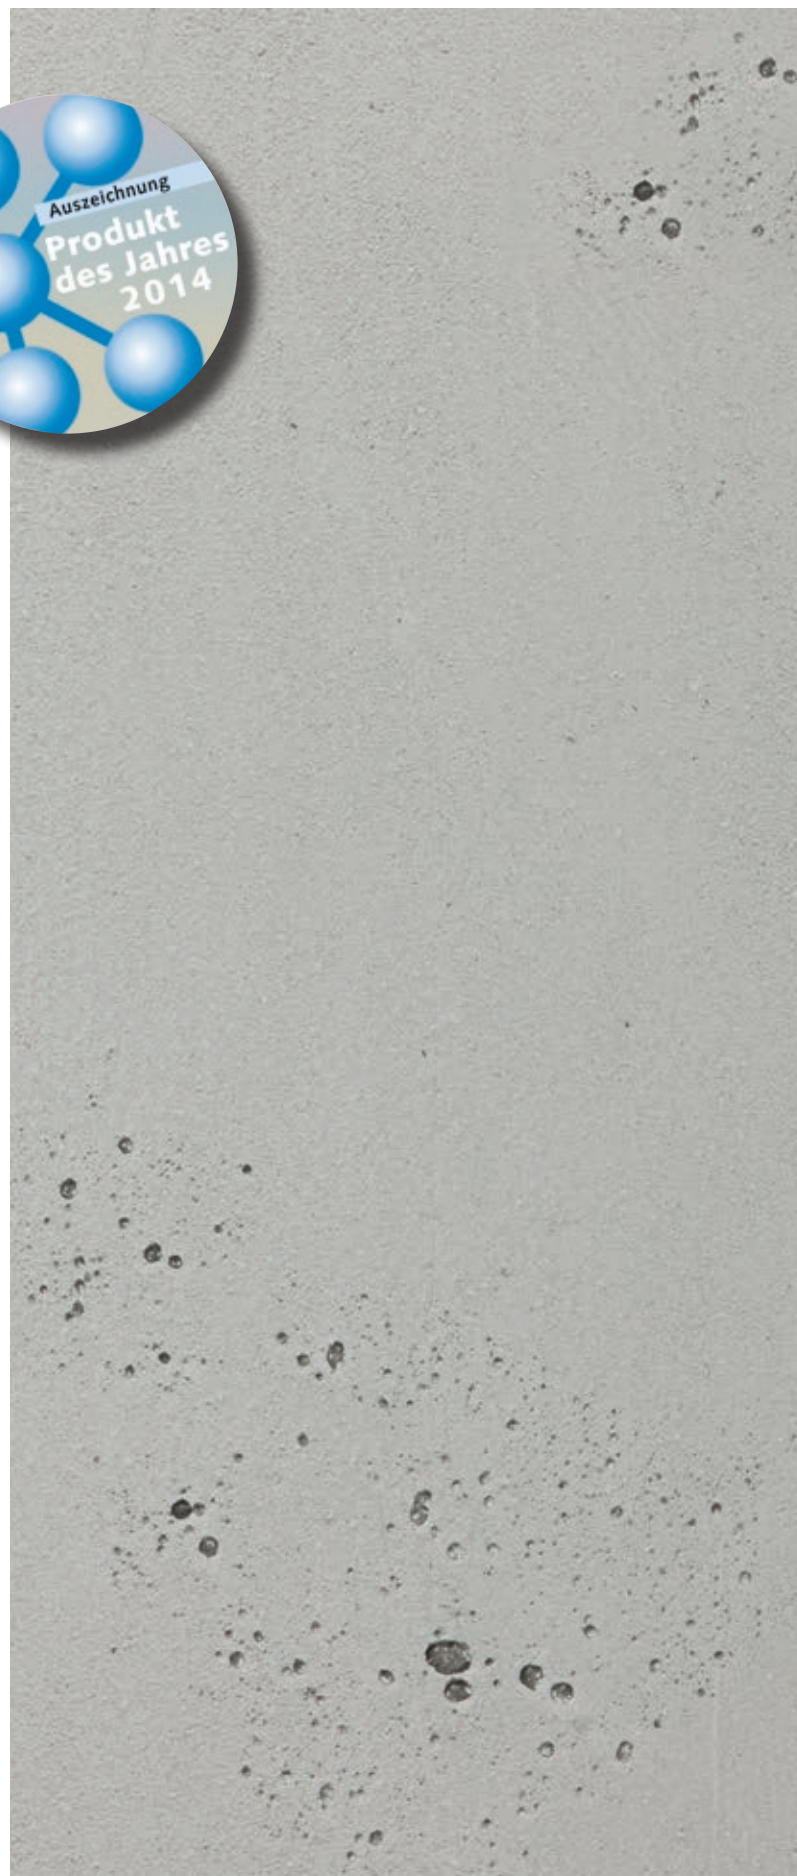

EXCLUSIVE

Art-Concrete with included relief.

ART-CONCRETE
RELIEF

Already in ancient Rome the artistic representation, which stands out from the background plastically, was used to decorate sculptures, buildings and works of art. This art form applied to Art-Concrete doors create an artistic masterpiece.

ART-CONCRETE
FORMWORK

Board formwork is the oldest form of mold construction in modern concrete construction. Art-Concrete is a modern composite material from a flexible mineral base, the optics and haptics resembling concrete. Both paired components provide a distinctive surface for your entrance door. The grain and the resulting unevenness, which are transferred from the natural product wood to the Art-Concrete, create a unique structure. Deviating surface structures are given.

6148-83   A

handle: 1042-13 stainless steel, integrated
Only available as sash overlapping door panel!

STAINLESS STEEL-
DESIGN

A special finishing treatment ensures a permanent sealing. The surface is clearly more scratchresistant, remains clean longer and is easy to clean. Fingerprints are largely prevented. These advantages combined with the cool, impressive look of stainless steel creates a dream for architects and designers. Combine functionality with exclusivity.

Noble and simple - design handles and grip plates perfectly matched to the door design. The panels with integrated design handle and embedded grip plate made of stainless steel - design form a harmonious unit. As if made from one piece, these panels underline the deliberately restrained form language of timeless modern doors with a noble, elegant character. Tip – Also available with additional LED Lighting.

Optionally also with Lighting 6976-44.

Light has the ability to change objects, improve their effect, and put the mood into a pleasant feeling. Use this effect for your entrance door. A luxurious look is created and the lighting also creates a sense of security, in the dark. Whether in the glass or in the handle: Integrated LED light-emitting diodes set unique accents and create an extraordinary atmosphere. The technology behind it is almost invisible and trend-setting.

EXCLUSIVE

The thought of uninvited guests at the door makes you feel uncomfortable? Not any longer! Thanks to electronic monitoring of the entrance area, you now have everything under control and you can feel safe. Behind the attractive door design is state-of-the-art technology: in the door intercom, the video camera and the bell with name plate. As soon as someone rings, the visitor's image appears on a color monitor and you can immediately see from your safe walls who is standing in front of the door.

T 11
Technique unit with bell button and intercom. Microphone, loudspeaker, bell button and video camera harmoniously fitted into the design of the front door. Inside intercom for freetalking with door opening switch as surface mounted device in white.
Also available for several participants.

T 12

Curved organic form used as a main element of an entrance door. A unique resulting look, including a fascinating depth effect. The handle made from DuPont™ Corian® gives the door elegance and durability. DuPont™ Corian® has a very good resistance to environmental pollution and is therefore an excellent choice in design.

Model 6639-99 | DuPont™ Corian®

Well-being, mental balance, harmony and vitality: Feng Shui („wind and water") can achieve all this. Turn your home into a true source of energy and live! The age-old Chinese teaching shows how people can favour harmony and balance in their own living environment. The teaching of Feng Shui knows the elements wood, fire, earth, metal and water. Adapted to these five elements and the two energy forces „Yin & Yang", this unique collection was developed. All models take up the complex design principles of Feng Shui and create a special feeling of security. In addition, the colours green, red, beige, grey and blue enhance the energies and are found throughout the Feng Shui collection.

Colani

C O U R A G E

HIS IDEAS ARE AVANT-GARDE.

HIS FORMS ARE FUTURISTIC AND BIODYNAMIC.

He tirelessly gives his visionary design philosophy energetic impetus: Luigi Colani, world champion of the elegant curve, is inspired by nature. Because: The cosmos is round. And so is the globe. So what could be more obvious than neglecting edges and diving into a new dimension of door design? Modern, exciting and trendsetting. . .

Colani-Courage stands for this new start. This unique door series designed by Luigi Colani - made by ARKA - inspires with pure design. And a formal language that touches the senses. Discover Colani-Courage.

Explore the soul of the door.

STAINLESS STEEL FLUSH

Flush applications in stainless steel design are not only visually an eye-catcher, but also particularly practical. The flat elements create a flat surface without edges and angles, in which no dirt can accumulate. The perfectly polished, stainless steel-like surface has a particularly high-quality finish and is therefore corrosion and dirt resistant, weather and UV resistant, easy to clean and insensitive to fingerprints. Touching is allowed here!

All models with applications have this exclusive equipment

With an elegant design baseplate, doors look particularly nice and are safely protected in the floor area against abrasion and wear. You decided on a door with a sash overlapping panel? Then we would like to recommend the combination with a design base plate. The elegant elements from stainless steel or PVC, are available in various styles.

SB 710-9 stainless steel design flush | 100 mm

ORNAMENTAL GLASSES

Insight or discretion - with some glasses the possible insight of your visitors is reduced to a minimum. With others, maximum transparency is possible. How do you decide? In any case for a plenty of light, which provides a cosy plus in your rooms.

DECORATIVE GLAZING

Genuine lead glazing
Each leaded glazing is supplied as a triple pane. The middle motif pane consists of single glasses in different colors and structures. These are framed in manual work with lead profiles and the crossing points are carefully soldered together.
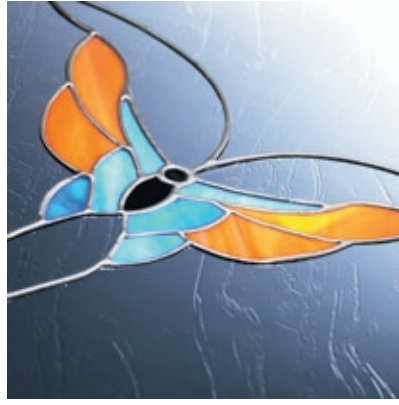

Genuine Tiffany glazing
In the Tiffany technique, individual pieces of glass are coated with a thin copper foil and soldered like mosaic pieces to form a filigree motif pane with high stability. This handmade motif pane is protected in the space between the panes of a triple glazing.
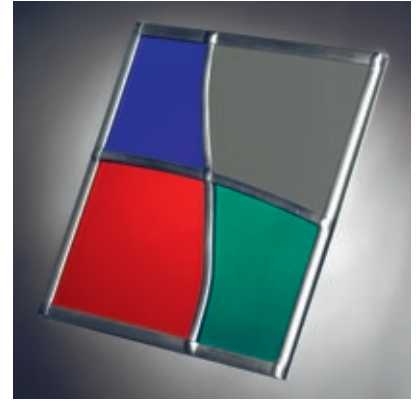

Lead ornamentation
Lead ornamentation glasses are handcrafted triple glazings. The middle continuous pane is coated on one side with light-resistant color foils, which are available in the color grey, green, blue or red. Lead strips glued on both sides emphasise the contours of the color fields.
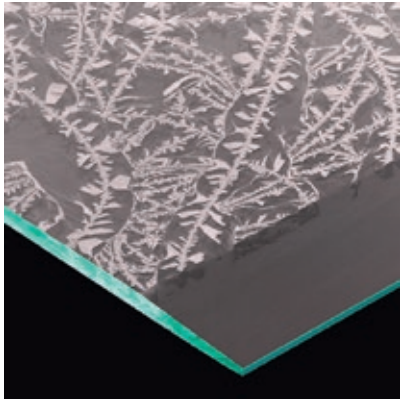

Genuine facet cut
Facet cuts gives a brilliant gloss to the glass. The glass edges are obliquely flattened by multistage grinding so that the light in this area breaks more and creates attractive light reflexes.

Genuine fluted bevel
Fluted bevel generate interesting light reflexes in the glass. Fine ornaments and contours are ground and polished into the glass surface in several operations in order to selectively break the incident light.
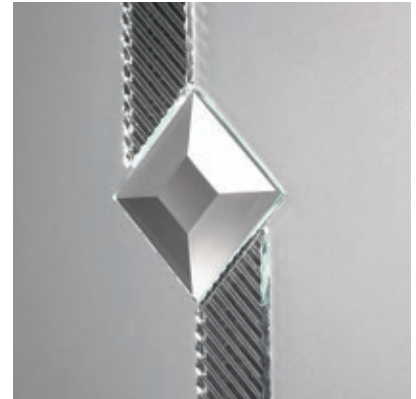

Glass- and facet stones
Clear and colored glass stones or polished facet stones set visual accents. The decorative applications are permanently bonded to a sand-blasted motif by crystal clear glues, that cure under ultraviolet light.
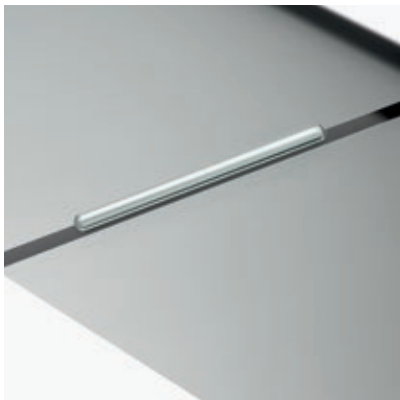

Glass rods
Transparent glass rods lend sandblasted glazings a modern and at the same time elegant appearance. The filigree applications bundle the incident light and create attractive lighting effects. Glass rods are connected to the matted glass using a special adhesive technology.

Structural glass-applications
Applications from strutural glass are real eyecatchers of sandblasted decorative glazings. They break the incident light due to their highly textured surface, so that in conjunction with frosted glass beautiful light reflexes are created. By using special glues, the applications are bonded to the motif pane.
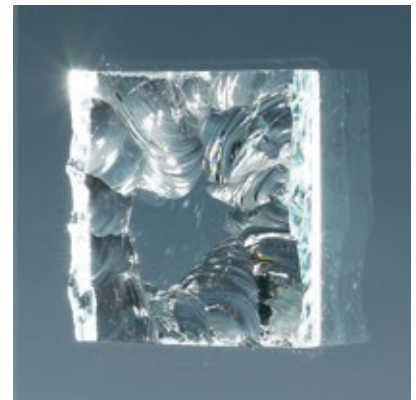

Hand chiseled glass
By manuel processing with hammer and chisel, glass surfaces are shaped strikingly. The result is a variety of shell-like surface structures that brilliantly refract the incident light. Each glass stone is unique with fascinating lighting effects.

Pyramid Stones

Accentuated pyramid stones from clear or colored glass underline the noble look of frosted decorative glazing. The optional in blue, red, green or clear available pyramid shaped applications are connected with a special gluing technology to the motif pane.

Swarovski® Crystals

In the inner pane applications of Swarovski® Crystals glitter and sparkle like diamonds. They consist of multi-facetted crystal glass, which reflects the incident light rays a hundred times. In combination with frosted glass a jewelry glazing is created with unsurpassed brilliance.

Matted glass

Sandblasted glasses fascinate by an interplay of matt and transparent surfaces. While sandblasting the glass surface is roughened with quartz sand under high air pressure. This produces frosted opaque motifs that look like fine mists.
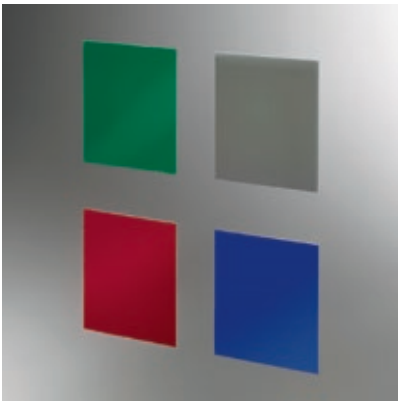

Colored glass motif

The interplay of frosted glass and accentuated color applications creates a rich contrast. With this technology, the sandblasted pane is coated with light-resistant color foils, which are available in grey, green, blue or red.
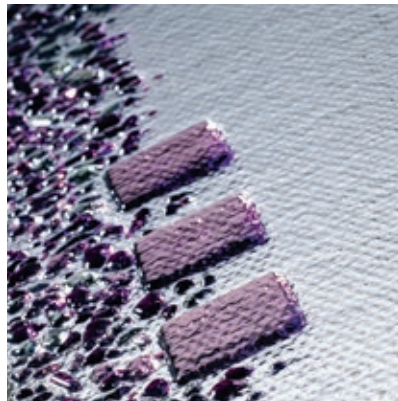

Fusing motif

In the fusing technique, several glasses in different colors and shapes are placed on a continuous pane and fused with it. This creates unique pieces with a fine, relief-like surface structure and incredible color brilliance.

Genuine frisian corners

The classic genuine frisian corners consist of hand-crafted color glass with filigree motifs ground into the glass surface. Fine bubbles and streaks are a quality feature of the glasses available in blue, green or red.

Curved glass

A glass pane is placed over a special shape in a vaulted furnace, heated and softened so that it deforms under the influence of gravity. The curved pane remains transparent; however, the view is slightly distorted by the curvature.

LED lighting effects

LED light-emitting diodes integrated in the glass create fascinating lighting effects. Light bands with many tiny LEDs in the edge compound of the glass allow the frosted surfaces of sandblasted glazing to shine discreetly from the inside out
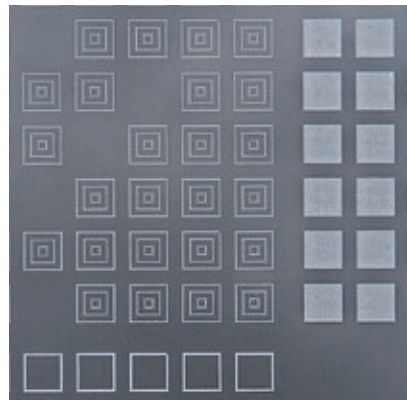

Laser engraving

Filigree motifs, photo-realistic representation of graphics, gradients or images - everything is possible with laser engraving. Through lateral lighting you achieve a unique brilliance of your motif, because the small lasered points direct the light outward and create a unique sparkle and rays.

Insert panel or sash overlapping panel ?

We offer three different versions for different requirements. Get an idea and choose between the insert panel, the outer or both-sided sash overlapping panel. Panels are usually inserted into the door leaf. You can see this from the small offset between the panel level and door profile. Overall, the continuous surface of a sash overlapping panel appears more generous. The door leaf is elegantly concealed on the outside.

Our Tip:

If you do not want any compromises in design, the both-sided sash overlapping panel is the optimal choice. Flat surfaces - outside as well as inside - are simply pure aesthetics. In addition, this variant scores with optimal thermal insulation and ease of care .On the following pages you will find further information on thermal insulation and safety.

A++ A+ A G

Standard thermal insulation
Insert panel with double glazing, inner pane
coated, argon gas charge in the space between
the panes, "warm" edge seal of the glazing.
Insulation core, highly insulating.
U-value of the glass: 1,1W/m2K**
U-value of a 28 mm thick entrance door panel*
inclusive glazing: 1,1 W/m2K

Thermal insulation set
Insert panel with triple glazing, inner
and outer pane coated, Argon- gas
charge in the space between the
panes, "warm" edge seal of the glazing.
Insulation core, highly insulating.
U-value of the glass: 0,7 W/m2
U-value of a 42 mm thick entrance door panel*
inclusive glazing: 0,8 W/m2K

Thermal insulation set "Premium"
One sided sash overlapping panel with triple-glazing
inner and outer pane coated, Argon-gas charge
in the space between the panes,
"warm" edge seal of the glazing.
Insulation core, highly insulating.
U-value oft he glass: 0,7 W/m2K**
U-value of a 42 mm thick entrance door panel* inclusive glazing: 0,8 W/m2K

Thermal insulation set "Premium Plus"
Both sided sash overlapping panel
with quadriple-glazing, inner and outer pane coated.
Argon-gas charge in the space between the panes
"warm" edge seal of the glazing.
Insulation core, highly insulating.
U-value of the glass: 0,5 W/m2K**
U-value of a 90 mm thick entrance door panel* inclusive glazing : 0,4 W/m2K

* All calculations based on door panel model 6508, for a dimension of 1000 x 2000 mm.
** Decorative glazings (for example led glazing) achieve deviating U-values.

Entrance door 1970
