MIRROR COLLECTION

for glazed models

More than a practical accessory - the mirror on the inside of the front door is cleverly used as an exclusive design element. For a large number of our glazed models, we offer elegant mirrors in combination with a frameless light cutout on the inside.
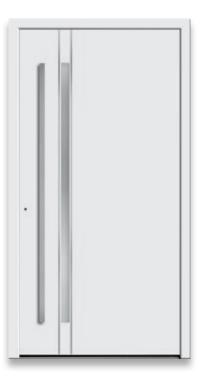

Please ask your specialist advisor!

ALL GLASS
SIDE PANELS

Design variants for your all glass side panel.

The design of the front door gives your home personality. Beside the front door, the side panel is an additional design element of the entrance area. Let light into your room, but unwanted views outside. Choose the design that matches your door model or be a designer yourself and give your front door a distinctive charm.

| Variant C |

Individual glazing.

Elegant and noblely solved - your house number integrated as a clear motif in the side panel. This creates a harmonic unit in the entrance area.

Example on page 30

| Variant B |

Glazing „frosted glass with clear edge".

„The Classic model" fits all models. Modern and stylish.

Example on page 97

| Variant C |

Glazing „frosted glass" with clear stripes" – optional clear stipes and clear edge. Perfect for models with pilaster strips or grooves. The number of clear stripes varies according to model.

Example on page 16

OSTERKAMP 3

| desired motif |

Individual glazing.
Complete the house no. with
the name of the street.

Example on page 58

| Variant D |

Glazings explicitly adapted to
the models.
Suggestions by our designers
can be found directly at the
models.

Example on page 231

| Variant F |

Glazing: frosted glass with
clear edge and clear stripes |
pilaster strips between the
panes. Perfect for models with
pilaster strips or grooves. The
number of pilaster strips varies
according to the model.

Example on page 36

| Variante G |

Glazing: Satinato pilaster
strips between the panes
– also available with clear
glass. Perfect for models with
pilaster strips or grooves. The
number of pilaster strips varies
according to the model.

Example on page 39

PATTERN PROTECTED

RODENBERG-models are pattern protected in design.

CERAMIC
The all-rounder made from natural raw materials.
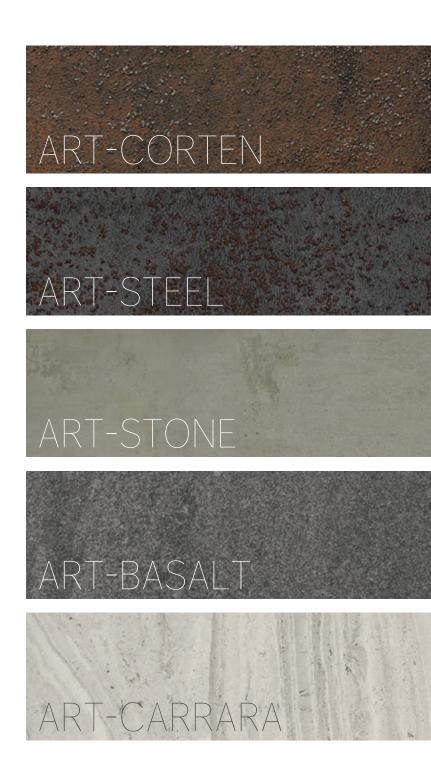

You like the rustic look? Then the Art-Corten series is just the thing. The series impresses with its beautiful rust look and makes your front door a long-lasting high-quality art object.

ART-CORTEN

Powerful, shiny, timeless, with a touch of industrial design, the metal effect of the Art-Steel series is impressive. The cool haptics and look of steel, imitated deceptively real - that is modernity in the 21st century.

ART-STEEL

An almost perfect replica of a natural stone look, fascinating and astonishing at the same time. Regardless of whether it is optics or haptics - the result of the Art-Stone series inspires and turns every entrance into a unique design element of the house facade.

ART-STONE
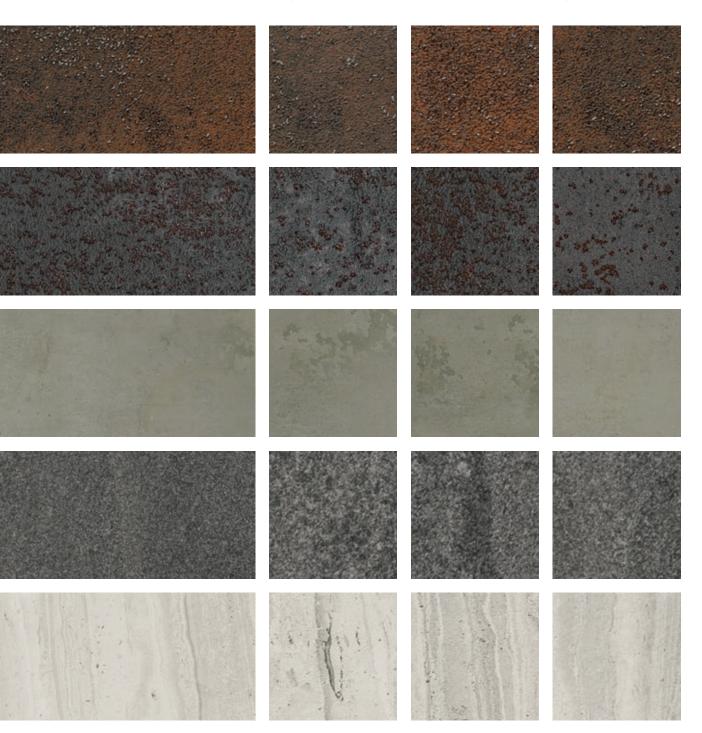

We invite you to dance on the volcano! Fascinatingly modeled after the natural stone of volcanic origin, the Art-Basalt series stands for the elemental forces of nature, power and strength! A real eye-catcher!

ART-BASALT

The Art-Carrara series has a touch of luxury. The name Carrara stands for tradition and elegance. Based on its natural model, the Art-Carrara series transforms your front door visually and tactilely into an extravagant luxury object.

ART-CARRARA

Our scratch-resistant and easy-care ceramic surfaces are made from natural raw materials. Deviations in color, shape and surface are therefore unavoidable and do not represent a defect, but underline the natural character. The different color pigments can vary depending on the batch and incidence of light. Each front door is therefore unique.

Images show different sections of the surfaces in their original size.

ART-BETON

Concrete optics,
concrete haptics
and yet no concrete!

Art-Concrete is a modern composite material from a flexible mineral base with natural marble parts, much lighter than concrete and therefore flexible to use. Facades with a door panel made of concrete give the façade a unique atmosphere. Each model is unique. Deviating surface structures are given.

ART
DECOR-LINE

The V-grooves set interesting accents in deep black (RAL 9005). This creates an incomparable depth effect. In combination with a RAL colour or decors in reclaimed wood look it is used as a design element. The natural, rustic and original looking wood decors run in two different directions and create a lively, natural effect.

LED
TECHNOLOGY

Light has the ability to change objects, improve their effect, and put the mood into a pleasant feeling. Use this effect for your entrance door. A luxurious look is created and the lighting also creates a sense of security, in the dark. Whether in the glass or in the handle: Integrated LED light-emitting diodes set unique accents and create an extraordinary atmosphere. The technology behind it, is almost invisible and trendsetting.

Colani
C O U R A G E

HIS IDEAS ARE AVANT-GARDE.
HIS FORMS ARE FUTURISTIC
AND BIODYNAMIC.

He has tirelessly given his visionary design philosophy energetic impetus: Luigi Colani, world champion of the elegant curve, is inspired by nature. Because: The cosmos is round. And so is the globe. So what could be more obvious than neglecting edges and diving into a new dimension of door design? Modern, exciting and trendsetting…
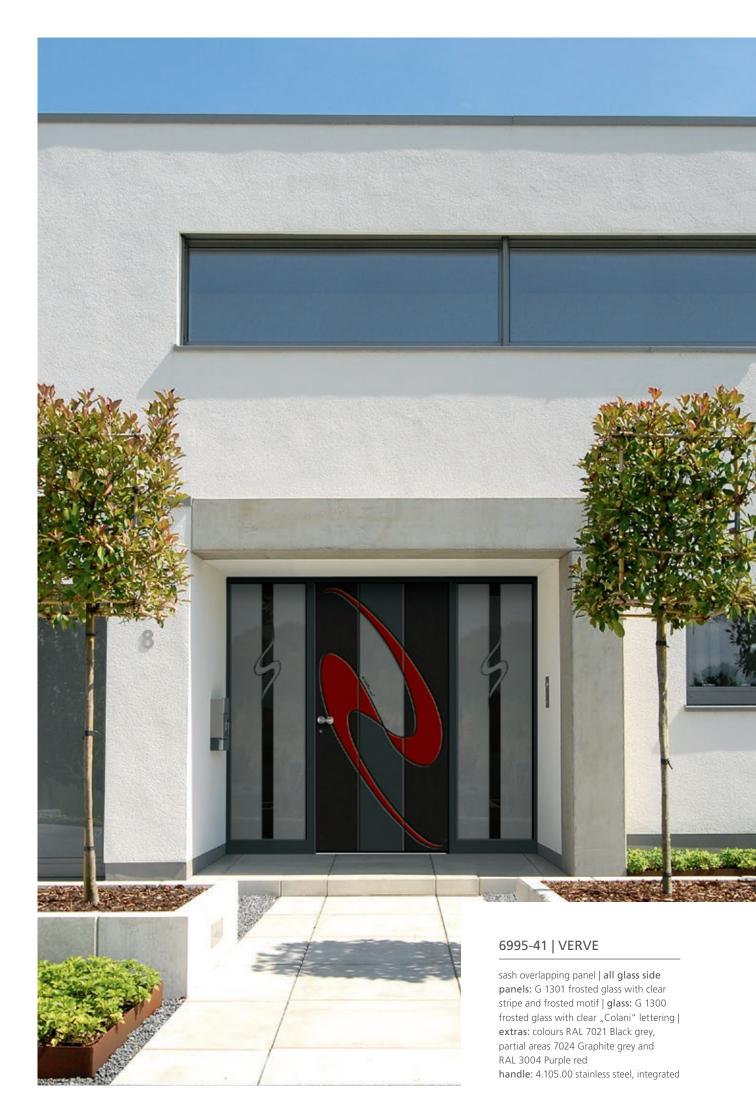

Colani-Courage stands for this new start. This unique door series designed by Luigi Colani - made by Rodenberg - inspires with pure design. And a formal language that touches the senses. Discover Colani-Courage.

Explore the soul of the door.

LUIGI COLANI * 1928 | † 2019

Luigi Colani died on September 16, 2019 in Karlsruhe at the age of 91.

We are proud to have worked with the design legend since 2008.

His vision of organic, round shapes, in harmony with the universe

and the earth he has brought to the door in a unique,

exclusive series. We are grateful to him.

Rodenberg Türsysteme AG mourns one
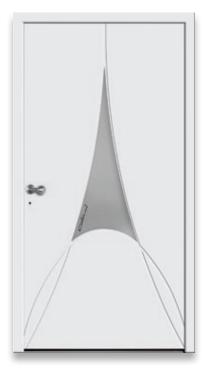

great designer and bon vivant – Luigi Colani.

geniune wood Jatoba*

Holzdekor Walnut

Handle bar with straight or oblique supports is available in the following measures:

8.130.10   1000 mm
8.130.16   1600 mm

* Jatoba care advice: outside handles made of real Jatoba wood are unique. The teak-like, red to medium brown wood is naturally particularly weather-resistant. With the right care, this can be reinforced. Regularly applied, commercially available wood oils prevent the formation of a silver-grey patina and preserve the elegant shimmer of color. Jatoba is a real natural product. Changes in the surface and grip pattern do not affect functionality and are not a cause for complaint.

the matching frame is supplied.

DESIGN PLATES

With an elegant design baseplate, doors look particularly nice and are safely protected in the floor area against abrasion and wear. You decided on a door with a sash overlapping panel? Then we would like to recommend the combination with a design base plate. The elegant elements from stainless steel or PVC, are available in various styles.

2.100.03 stainless steel design flush | 30 mm

2.200.03 black steel design RAL 9005 fine structure flush | 30 mm

2.100.10 stainless steel design flush | 100 mm

2.125.10 stainless steel design Softline | 105 mm

STAINLESS STEEL FLUSH
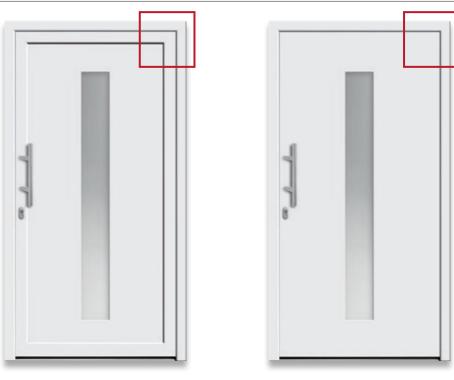

Flush applications in stainless steel design are not only visually an eye-catcher, but also particularly practical. The flat elements create a flat surface without edges and angles, in which no dirt can accumulate. The perfectly polished, stainless steel-like surface has a particularly high-quality finish and is therefore corrosion and dirt resistant, weather and UV resistant, easy to clean and insensitive to fingerprints. Touching is allowed here! All models with applications have this exclusive equipment

TYPE OF CONSTRUCTION

Choose the lokk of your door inside and outside. Door panels can either be inserted into the wing or can be produced as a sash overlapping panel. The continous surface of a sash overlapping panel looks more generous. The door wing is elegantly concealed and brings further advantages in terms of thermal insulation and ease to care. Your local specialist advisor will be happy to inform you.

DECORATIVE GLAZING

Genuine lead glazing
Each leaded glazing is supplied as a triple pane. The middle motif pane consists of single glasses in different colors and structures. These are framed in manual work with lead profiles and the crossing points are carefully soldered together.

Genuine facet cut
Facet cuts gives a brilliant gloss to the glass. The glass edges are obliquely flattened by multistage grinding so that the light in this area breaks more and creates attractive light reflexes.

Genuine fluted bevel
Fluted bevel generate interesting light reflexes in the glass. Fine ornaments and contours are ground and polished into the glass surface in several operations in order to selectively break the incident light.

Glass- and facet stones
Clear and colored glass stones or polished facet stones set visual accents. The decorative applications are permanently bonded to a sand-blasted motif by crystal clear glues, that cure under ultraviolet light.

Glass rods
Transparent glass rods lend sandblasted glazings a modern and at the same time elegant appearance. The filigree applications bundle the incident light and create attractive lighting effects. Glass rods are connected to the matted glass using a special adhestive technology.

Hand chiseled glass
By manuel processing with hammer and chisel, glass surfaces are shaped strikingly. The result is a variety of shell-like surface structures that brilliantly refract the incident light. Each glass stone is unique with fascinating lighting effects.

Structural glass-applications
Applications from strutural glass are real eyecatchers of sandblasted decorative glazings. They break the incident light due to their highly textured surface, so that in conjunction with frosted glass beautiful light reflexes are created. By using special glues, the applications are bonded to the motif pane.

Swarovski® Crystals
In the inner pane applications of Swarovski® Crystals glitter and sparkle like diamonds. They consist of multi-facetted crystal glass, which reflects the incident light rays a hundred times. In combination with frosted glass a jewelry glazing is created with unsurpassed brilliance.

Genuine frisian corners
The classic genuine frisian corners consist of hand-crafted color glass with filigree motifs ground into the glass surface. Fine bubbles and streaks are a quality feature of the glasses available in blue, green or red.

Frosted glass

Sandblasted glasses

Sandblasted glasses fascinate by an interplay of matt and transparent surfaces. While sandblasting the glass surface is roughened with quartz sand under high air pressure. This produces frosted opaque motifs that look like fine mists.
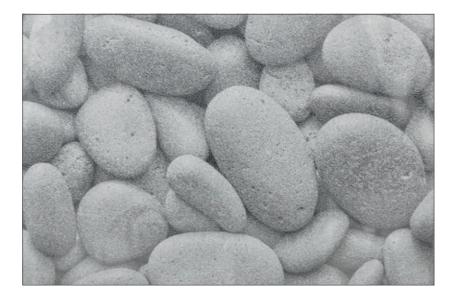

Coloured frosted glasses

The colored design of matted glasses also shows how versatile the sandblasting process can be. For this purpose, fine color pigments are applied tot he already matted, sandblasted surface and evenly incorporated. The glazing thus obtains beautiful, contemporary accents in combination with sandblasted motifs and glass stones.
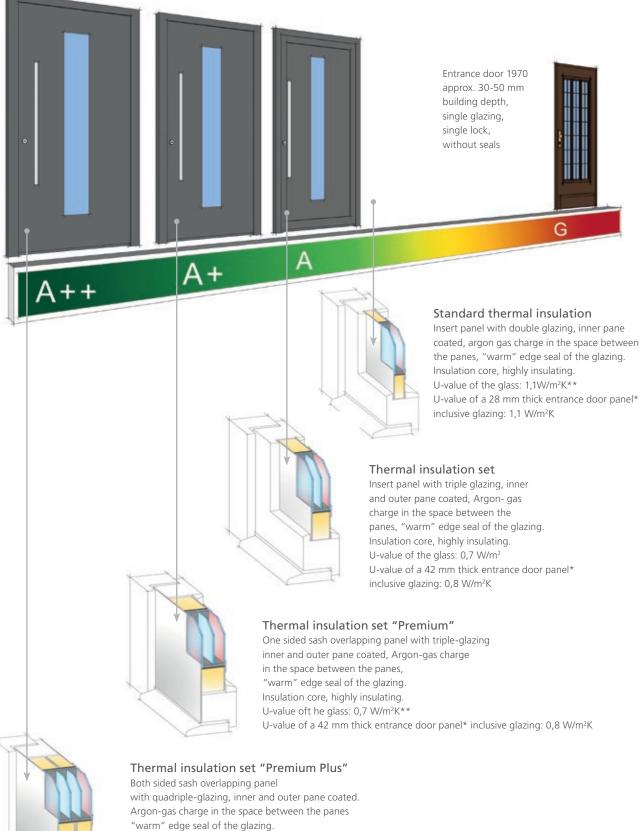

Laser engraving

Filigree motifs, photo-realistic representation of graphics, gradients or images - everything is possible with laser engraving. Through lateral lighting you achieve a unique brilliance of your motif,

TECHNOLOGY & ACCESSORIES

THERMAL INSULATION

Entrance door 1970
approx. 30-50 mm
building depth,
single glazing,
single lock,
without seals

A++ **A+** **A** **G**

Standard thermal insulation
Insert panel with double glazing, inner pane
coated, argon gas charge in the space between
the panes, "warm" edge seal of the glazing.
Insulation core, highly insulating.
U-value of the glass: 1,1W/m^{2}K**
U-value of a 28 mm thick entrance door panel*
inclusive glazing: 1,1 W/m^{2}K

Thermal insulation set
Insert panel with triple glazing, inner
and outer pane coated, Argon- gas
charge in the space between the
panes, "warm" edge seal of the glazing.
Insulation core, highly insulating.
U-value of the glass: 0,7 W/m^2
U-value of a 42 mm thick entrance door panel*
inclusive glazing: 0,8 W/m^{2}K

Thermal insulation set "Premium"
One sided sash overlapping panel with triple-glazing
inner and outer pane coated, Argon-gas charge
in the space between the panes,
"warm" edge seal of the glazing.
Insulation core, highly insulating.
U-value oft he glass: 0,7 W/m^{2}K**
U-value of a 42 mm thick entrance door panel* inclusive glazing: 0,8 W/m^{2}K

Thermal insulation set "Premium Plus"
Both sided sash overlapping panel
with quadriple-glazing, inner and outer pane coated.
Argon-gas charge in the space between the panes
"warm" edge seal of the glazing.
Insulation core, highly insulating.
U-value of the glass: 0,5 W/m^{2}K**
U-value of a 90 mm thick entrance door panel* inclusive glazing : 0,4 W/m^{2}K

* All calculations based on door panel model 6508, for a dimension of 1000 x 2000 mm.

** Decorative glazings (for example led glazing) achieve deviating U-values.

SAFETY

Entrance door 1970
approx. 30-50 mm
building depth,
single glazing,
single lock,
without seals

Safety set 1

Tested safety of the door panel according to valid
resistance class RC1.
Glazing outside 6 mm thick laminated safety
glass. The glazing is glued circumferentially into
the glass cut.

additional bonding
